

# HALO®

## Introducing Halo LED Recessed Lighting!

A sustainable and energy-efficient solution designed for new construction and existing applications.

Using less than 15 watts with comparable light output to a 65 watt BR30 lamp (or 18 watt CFL luminaire), the dimmable LED module lasts 50,000 hours (or approximately 20 years) and installs into a new construction housing or into existing Halo and All-Pro housings.
